

“GOING GREEN”

December 1st, 2011

Alpha Aluminum frames are 100% recyclable and all waste generated in the manufacturing process is recovered, and re-enters the recycling chain. Like few other materials, aluminum can be recycled over and over again, plus, its significant scrap value keeps it diverted from the waste stream, making it a truly “green” product. Recycling aluminum takes only 1/20th of the energy required to produce it, reducing greenhouse gas emissions.

Our raw materials are extruded from billet that is composed of at least 75% recycled aluminum, making it **LEED compliant** as well. It contains, at the minimum:

- **50% Pre-Consumer Material (PCM)**
- **25% Post-Consumer Waste (PCW)**

Alpha Aluminum frames also qualify for **LEED credit as a regional material** for most projects in California, Nevada and Arizona. Our raw materials are extruded in Ontario, CA and frames are manufactured in Anaheim, CA
